There is a new ArabTEX language mode, `\setmalay`, for processing Old Malay texts in the extended Arabic writing.

This mode works only with ArabTEX version 3.06 or later.

Old Malay input texts are encoded in a modification of the standard ArabTEX encoding, see below.

This language mode is strictly experimental and expected to contain many errors. Please report your experience and suggestions for changes and improvements to the author.

Additional encodings (note the variants):

p		ڤ
g		ڬ
v		ۏ
ng	~g	ڠ
ny	~n	ڽ
c	^c	چ
